Hiring Analytics and Engineering Team

Engineering Recruitment Selection Committee
California, United States

Dear Hiring Manager,

I am writing to express my strong interest in joining your team as a Chemical Engineer. As a prospective graduate holding a Bachelor of Science in Chemical Engineering from California State University, Long Beach, and possessing robust hands-on project management experience, I am eager to apply my technical acumen and operational leadership to support your engineering goals. My background blends rigorous theoretical study in transport phenomena, process control, and reactor design with practical engineering achievements, positioning me to deliver immediate value to your organization.

Throughout my academic career, I have excelled at translating complex engineering frameworks into physical and simulated solutions. As the Project Manager and Engineer for the AIChE CSULB Chem-E Car project, I spearheaded the optimization of Aluminum-Air and thermoelectric batteries to maximize power efficiency and performance consistency. Utilizing my programming competencies and knowledge of kinetics, I optimized a Chemical Chameleon stopping mechanism to achieve an exceptionally precise predictive fit with an R^2 value of 0.98. This rigorous design process directly culminated in our team winning both the poster and car competitions at the AIChE Western Regional Conference. Furthermore, my Senior Design Project expanded my process modeling capabilities through simulating multiple-column tequila distillation operations using AVEVA PRO/II, where I systematically analyzed critical operational parameters and production economics.

Complementing my technical capabilities is a proven track record of cross-functional team leadership and rigorous adherence to regulatory safety. As an AIChE Project Manager, I managed team selection interviews and closely coordinated with university and department safety officers to guarantee absolute regulatory compliance and hazard mitigation during complex chemical handlings. My professional experience at Target as a Guest Advocate Pacesetter further honed my real-world communication and management adaptability. Entrusted to lead store-wide operations during leadership absences, I consistently maintained strict operational efficiency, resolved complex challenges, and optimized multi-department workflow strategies.

I am incredibly excited about the prospect of bringing my unique combination of simulation proficiency (AVEVA PRO/II, MATLAB, Autodesk Inventor), rigorous experimental execution, and collaborative team leadership to your company. Thank you for your time, consideration, and review of my application materials. I look forward to discussing how my background and engineering drive align with your current operational needs.

Sincerely,

Gustavo De la Torre Garcia
